

One-pager – changes

Layout changes:

1. Add website background image to make the website looks more comfortable and better.
2. Change the title style in the header to make the title looks better. And put contact information into contact me page.
3. Change the position and style of navigation Bar. Now, the navigation bar is between header and content, so it is easier and more convenient for users to find the content through navigation.
4. Add the background image in the content. And change the style of content to make users look at resume more comfortable.
5. Add social links with images in footer. These links can let users know more about me through various social websites.

Other changes:

1. Change the font family, font color, font weight and font size of title in the header and content to make users look more comfortable. In content part, I change the line height to make content looks better.

One-pager – JavaScript:

1. The first javascript is in the portfolio page. It uses to show image div and hide image div. Users choose the different works through they click the button. For example, if user wants to show the photoshop works, he just need to click the photoshop button. This function can make users more convenience to find the works what they want.
2. The second javascript is also in portfolio page. It uses to show a bigger imager following the mouse when the users across the pictures and disappear when the mouse move out. This function can make users look at photo more clearly and convenience.
3. The third javascript is in contact me page. It uses to validate the form. For example, if user wants to send me a message in this page, he needs to write down his name, email and message. If one of them is empty or having wrong format, the error message will show under the text fields. This function can make sure that users send the correct message to me, so I can reply them as soon as possible.
